

NZ GREEN Grid Household Power Demand Profiles: Heat Pump

Data extraction and preliminary plots

Ben Anderson (b.anderson@soton.ac.uk, @dataknut)

Last run at: 2018-06-08 12:02:32

1 Status

Full run using all data from /Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/

2 Citation

If you wish to use any of the material from this report please cite as:

- Anderson, B. (2018) GREEN Grid Heat Pump Profiles, University of Otago: Dunedin, NZ.

3 Introduction

Report circulation:

- Restricted to: NZ GREEN Grid project partners and contractors.

3.1 Purpose

This report is intended to:

- load and clean the project electricity power data (Grid Spy)
- select the Heat Pump circuits (via their labels)
- build exploratory demand profiles

3.2 Requirements:

- cleaned and safe grid spy 1 minute data processed via <https://git.soton.ac.uk/bale12/nzGREENGrid/blob/master/dataProcessing/processNZGGElecCons1minData.Rmd>

3.3 History

Generally tracked via our git.soton repo:

- history
- issues

3.4 Support

This work was supported by:

- The University of Otago
- The New Zealand Ministry of Business, Innovation and Employment (MBIE)
- SPATIALEC - a Marie Skłodowska-Curie Global Fellowship based at the University of Otago's Centre for Sustainability (2017-2019) & the University of Southampton's Sustainable Energy Research Group (2019-202).

This work is (c) 2018 the University of Southampton.

We do not ‘support’ the code but if you have a problem check the issues on our repo and if it doesn’t already exist, open one. We might be able to fix it :-)

4 Load data files

4.1 Grid Spy metadata

In this section we load metadata from /Users/ben/Syncplicity Folders/Green Grid Project Management Folder/Gridspy/Master list of Gridspy units.xlsx to link to the power data.

4.2 Grid Spy data

In this section we load the cleaned data files from /Volumes/hum-csafe/Research Projects/GREEN Grid/Clean_data/safe/gridSpy/1min/data/. If we loaded all the data at once and then filtered out what we want we might run out of memory so we filter as we load. Set the filters here:

```
circuitPattern <- params$circuitPattern  
dateFrom <- params$dateFrom  
dateTo <- params$dateTo  
  
plotCaption <- paste0("Source: ", fpath,  
                      "\nCircuits: ", circuitPattern, " from ", dateFrom, " to ", dateTo)
```

So we are looking for Heat Pump circuits between 2015-04-01 and 2016-03-31. We do this by checking to see if the extract file has already been created. If so we load it. If not, we create it.

The file we are looking for is: Heat Pump_2015-04-01_2016-03-31_observations.csv

```
## [1] "/Volumes/hum-csafe/Research Projects/GREEN Grid/Clean_data/safe/gridSpy/1min/dataExtracts/Heat  
## [1] "# Loaded 14,252,439 rows of data"
```

The following table summarises the Heat Pump data we have found.

Summary of household grid spy data for: Heat Pump

Note that some households may have more than one Heat Pump circuit.

4.3 Test Heat Pump data

This section tests the availability of Heat Pump data by replicating the standard data quality checks used for the whole gridSpy dataset.

The following plot shows loaded data observation plots - just to confirm what Heat Pump data we have.

The next plot shows the same data but as a dot plot to highlight those households and dates where we did not receive $60 * 24 = 1440$ observations per day.

umcsafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
Circuits: Heat Pump from 2015-04-01 to 2016-03-31

The following table shows the min/max observations per day and min/max dates for each household. As above, we should not see:

- dates before 2014 or in to the future (indicates date conversion errors)
- more than 1440 observations per day (indicates potentially duplicate observations)
- non-integer counts of circuits as it suggests some column errors

We should also not see NA in any row (indicates date conversion errors).

If we do see any of these then we still have data cleaning work to do!

Summary observation stats by hhID (sorted by date last heard from) for: Heat Pump

We seem to have some negative powerW values and at least one very large power value.

Nasty surprises often lurk in histograms... The following histogram shows all observations.

Source: /Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
Circuits: Heat Pump from 2015-04-01 to 2016-03-31

The next shows the histogram for powerW < 1000W...

Source: /Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
Circuits: Heat Pump from 2015-04-01 to 2016-03-31

There are a lot of zeros (as we'd expect) but why are there negative values?

5 Heat Pump profiles

This section produces the profiles as one for each HH but averaged over each season. Data is kept at 1 minute intervals. Note definition of season below...

```
# add season
gs1MinDT <- gs1MinDT[, month := lubridate::month(r_dateTime, label = TRUE)]
gs1MinDT <- gs1MinDT[, season := "Summer"]
gs1MinDT <- gs1MinDT[, season := ifelse(month == "Mar" |
                                         month == "Apr" |
                                         month == "May", "Autumn", season)]
gs1MinDT <- gs1MinDT[, season := ifelse(month == "Jun" |
                                         month == "Jul" |
                                         month == "Aug", "Winter", season)]
gs1MinDT <- gs1MinDT[, season := ifelse(month == "Sep" |
                                         month == "Oct" |
                                         month == "Nov", "Spring", season)]
```

5.1 Profile plots: means per household

This section shows a plot of mean profiles for each household by season.

/Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
Circuits: Heat Pump from 2015-04-01 to 2016-03-31
n households = 29

```

NA

Max. :1778.669

As we can see there is considerable variation between households in both the level and timing of heat pump demand.

Note that the code saves a high definition version of the plot and the profiles for future re-use.

The .csv.gz file can be loaded using the following code:

- df <- readr::read_csv("/Volumes/hum-csafe/Research Projects/GREEN Grid/Clean_data/safe/gridSpy/1min/Pump_2015-04-01_2016-03-31_byHouseholdSeasonalProfiles.csv.gz") or
- dt <- data.table::as.data.table(readr::read_csv("/Volumes/hum-csafe/Research Projects/GREEN Grid/Clean_data/safe/gridSpy/1min/profiles/Heat Pump_2015-04-01_2016-03-31_byHouseholdSeasonalProfiles.csv.gz")) if you prefer data.table

5.2 Profile plots: overall household mean

This section shows a plot of mean and median profiles across all household by season. The mean profile also shows the level of variance by plotting error bars at +/- 1 s.d.

```
e: /Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
  Circuits: Heat Pump from 2015-04-01 to 2016-03-31
          n households = 29
          Error bars = +/- 1 s.d.
```

```
## [1] "Saving plot to Heat Pump_2015-04-01_2016-03-31_overallMeanSeasonalProfilePlot.png"
```

e: /Volumes/hum-csafe/Research Projects/GREEN Grid/_RAW DATA/GridSpyData/
 Circuits: Heat Pump from 2015-04-01 to 2016-03-31
 n households = 29

```

Max. :879.1

The difference between the mean and median plots is instructive - it suggests that the mean plots for summer are skewed by a few higher heat pump-using households.

The plots could be repeated or re-facted e.g. by household size.

As before, the code saves a high definition version of the plot and the profiles for future re-use.

6 Runtime

Analysis completed in 724.15 seconds (12.07 minutes) using knitr in RStudio with R version 3.5.0 (2018-04-23) running on x86_64-apple-darwin15.6.0.

7 R environment

R packages used:

- base R - for the basics (R Core Team 2016)
- data.table - for fast (big) data handling (Dowle et al. 2015)
- lubridate - date manipulation (Grolemund and Wickham 2011)
- ggplot2 - for slick graphics (Wickham 2009)
- readr - for csv reading/writing (Wickham, Hester, and Francois 2016)
- dplyr - for select and contains (Wickham and Francois 2016)
- progress - for progress bars (Csárdi and FitzJohn 2016)
- knitr - to create this document & neat tables (Xie 2016)
- kableExtra - for extra neat tables (Zhu 2018)
- nzGREENGrid - for local NZ GREEN Grid project utilities
